🚀 Excited to share a milestone moment: I've just completed my first project in data analysis, focusing on restaurant sales analysis! 📸💼

In this project, I started the fascinating world of data analytics, utilizing various tools and techniques to derive actionable insights. Here's a glimpse into what I accomplished:

📊 **Dynamic Dashboard**: Including slicers in Excel, I crafted a dynamic dashboard that provides real-time insights into restaurant sales performance. This interactive interface allows stakeholders to effortlessly explore key metrics and trends.

💡 **DAX Measures**: With the power of Data Analysis Expressions (DAX), I created custom measures to calculate important KPIs such as average sales, peak hours, and customer retention rates. These measures provided invaluable insights into the restaurant's operational efficiency and customer behavior.

🔄 **Power Query Editor**: To ensure data accuracy and consistency, I utilized Power Query Editor to clean, transform, and shape the raw data. By standardizing data formats and removing inconsistencies, I laid a solid foundation for meaningful analysis.

This project was an incredible learning experience, allowing me to apply theoretical knowledge in a real-world setting. I'm grateful for the opportunity to work on such an impactful project and look forward to applying my newfound skills to future endeavors.
